Create content

Introduction

To create a content, you firstly need to <u>create a content type</u>.

Once you created your content type, a new entree will be added to the CMS \rightarrow Your Content Name menu.

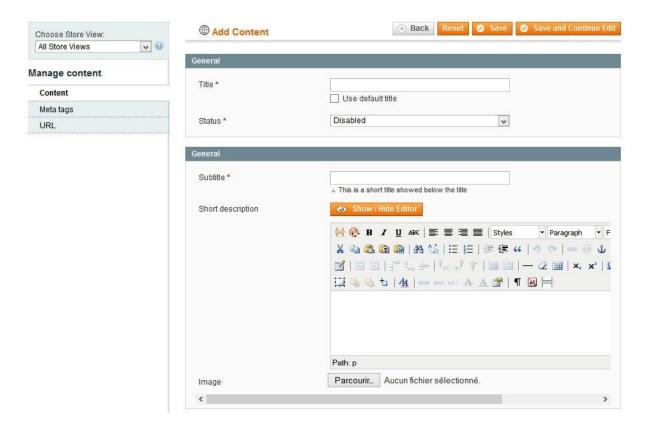

If you are not administrator, make sure you have the permissions to create this content.

To create a content, click on "Add YourContentName" button.

Step 1 - Tab Content

This section is containing all the fields which composed your content, previously defined when creating the content type. New fields can be added at any time.

General \rightarrow Title: This represents the page title of your content.

General \rightarrow Status: This define if your content is enabled or not, it will results to be shown or not on frontend.

Then follow all customizable fieldset and fields for your content.

Click here to have a full description of each fields types.

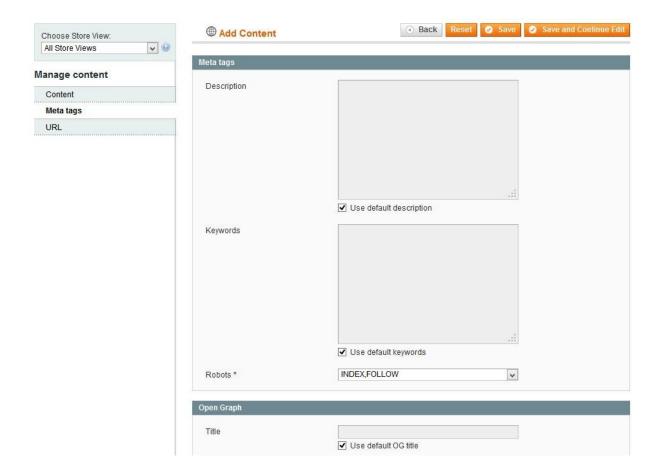

Step 2 - Tab Meta tags

This section define your meta tags for your content page.

These fields may have a default value, depending of your content type configuration.

Also, they may have a default value, with patterns auto-replacements.

These patterns will automatically be replaced by their corresponding value, based on your content, when saving your content.

Step3 - URL

This section is defining your content URL.

This field may have a default value, with patterns auto-replacements.

These patterns will automatically be replaced by their corresponding value, based on your content, when saving your content.

If your content is attached to menu, the secondary URL are also listed in this place as a summary. You can modify it and select the one that are canonical directly from this form.

If no canonical are selected, the default URL will be used.

Translations

If your are using a multi store views website for translation, Advanced Content Manager allow you to translate each content.
